archive_entry_update_pathname_utf8,
                                                   archive_entry_sourcepath,
archive_entry_copy_sourcepath,
                                                      archive_entry_symlink,
archive_entry_symlink_w,
                                                  archive_entry_set_symlink,
archive_entry_copy_symlink,
                                               archive_entry_copy_symlink_w,
archive_entry_update_symlink_utf8 — functions for manipulating path names in archive entry
descriptions
```

### **LIBRARY**

Streaming Archive Library (libarchive, -larchive)

#### **SYNOPSIS**

```
#include <archive_entry.h>
const char *
archive_entry_hardlink(struct archive_entry *a);
const wchar t *
archive_entry_hardlink_w(struct archive_entry *a);
archive_entry_set_hardlink(struct archive_entry *a, const char *path);
void
archive_entry_copy_hardlink(struct archive_entry *a, const char *path);
archive_entry_copy_hardlink_w(struct archive_entry *a, const, wchar_t,
    *path");
int
archive_entry_update_hardlink_utf8(struct archive_entry *a,
    const char *path);
void
archive_entry_set_link(struct archive_entry *a, const char *path);
archive_entry_copy_link(struct archive_entry *a, const char *path);
void
archive_entry_copy_link_w(struct archive_entry *a, const wchar_t *path);
archive_entry_update_link_utf8(struct archive_entry *a, const char *path);
const char *
archive_entry_pathname(struct archive_entry *a);
```

```
const wchar_t *
archive_entry_pathname_w(struct archive_entry *a);
archive_entry_set_pathname(struct archive_entry *a, const char *path);
void
archive_entry_copy_pathname(struct archive_entry *a, const char *path);
archive_entry_copy_pathname_w(struct archive_entry *a,
    const wchar_t *path);
archive_entry_update_pathname_utf8(struct archive_entry *a,
    const char *path);
const char *
archive_entry_sourcepath(struct archive_entry *a);
archive_entry_copy_sourcepath(struct archive_entry *a, const char *path);
const char *
archive_entry_symlink(struct archive_entry *a);
const wchar t *
archive_entry_symlink_w(struct archive_entry *a);
archive_entry_set_symlink(struct archive_entry *a, const char *path);
void
archive_entry_copy_symlink(struct archive_entry *a, const char *path);
archive_entry_copy_symlink_w(struct archive_entry *a, const wchar_t *path);
archive_entry_update_symlink_utf8(struct archive_entry *a,
    const char *path);
Path names supported by archive entry(3):
hardlink
            Destination of the hardlink.
link
            Update only. For a symlink, update the destination. Otherwise, make the entry a hardlink
            and alter the destination for that.
           Path in the archive
pathname
```

## **DESCRIPTION**

Path on the disk for use by archive\_read\_disk(3). sourcepath

symlink Destination of the symbolic link.

Path names can be provided in one of three different ways:

char \* Multibyte strings in the current locale.

wchar t\* Wide character strings in the current locale. The accessor functions are named **XXX\_w**().

UTF-8 Unicode strings encoded as UTF-8. This are convience functions to update both the multibyte

and wide character strings at the same time.

The sourcepath is a pure filesystem concept and never stored in an archive directly.

For that reason, it is only available as multibyte string. The link path is a convience function for conditionally setting hardlink or symlink destination. It doesn't have a corresponding get accessor function.

archive\_entry\_set\_XXX() is an alias for archive\_entry\_copy\_XXX().
